SourceOne™ Global Partners Contributes Vitamin E Isomers to Ensure Accurate Testing

Commitment to science and breakthrough technologies reinforced

CHICAGO, IL – SourceOne™ Global Partners, a leading marketer of tocotrienols, is committed to advancing the science of tocotrienol research and analysis by offering the most concentrated and highest purity tocotrienol isomer standards available, reported Jim Roza, Vice President of Science and Technology for SourceOne. In collaboration with strategic partner, Davos Life Science, Singapore, the two companies have donated tocotrienol isomers to Craft Technologies (a leader in lipid research) and NPRI (a leading supplier of lipid-based powders through its proprietary O2P technology) to verify the potency of tocotrienol products.

“Due to a lack of high quality standards, the analysis of tocotrienols is commonly done using a tocopherol response factor which is a less accurate means of quantifying these isomers,” Roza explains. “As previous tocotrienol standards currently sold have been shown to have potencies that were 30% less than their stated claim, SourceOne tocotrienol standards have a guaranteed potency **of 97%** for its alpha, beta, gamma, and delta isomers.

“We have teamed with Davos to provide pure standards that ensure the test methods are accurate and that health-conscious consumers are offered a superior-quality tocotrienol supplement that they can rely upon to act in the body in the exact manner that the research demonstrates,” says Roza, who previously served as the President of the Natural Products Foundation, a not-for-profit organization working to raise industry standards and as Vice-Chair of NNFA ComPli (standards) committee.

Jesse Lopez, President and CEO of SourceOne states, “The industry recognizes the importance of validated test methods and verified standards as a crucial component of good manufacturing practices (GMPs). New impending federally mandated GMPs will soon be released and are certain to place a greater burden on manufacturers to ensure that their product meets all stated label claims. SourceOne has taken a leading role by ensuring that all SourceOne products meet these claims and provide the health conscious consumer with a clinically proven, safe, and effective health solution. This investment in research and development is the foundation upon which we will continue to build long-term relationships with our brand marketing and manufacturing customers.”

About SourceOne

SourceOne Global Partners, headquartered in Chicago, IL, represents a new breed of ingredient supplier, partnering with manufacturing clients to introduce powerfully branded, science-driven products to market with unique product positioning and compelling consumer presence. SourceOne was conceived as a company whose core
